

### **An Automatic Mitre Box**

Did you ever want to get the true center cut of a corner when you didn't know how many degrees the corner was out of square? Or did you ever want to get the true radius cut in circle work when you didn't know the radius of the circle? The Kawalle Automatic Mitre Box makes this kind of cut without any figuring on the part of the carpenter.

One of the illustrations shows the remarkable range of angles possible in this mitre box. The boxes can be swung through almost a complete circle, giving any angle that is ever wanted. You don't have to know anything about degrees. When you have any odd corner, just set the backs to that bevel, and

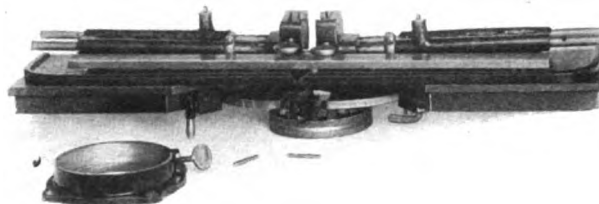

---

it will give the true cuts of that corner. To get the radius cut of any circle place the circular piece against the pins and pull the tables forward until both backs touch the section. The saw will then give a true radius cut.

**Kawalle Box Set for Wide Angle Work.**

The second illustration shows the mitre box as folded together to place in a tool case. The backs are released by loosening the thumb screw and the saw guides are

**Kawalle Box Folded for Packing.**

removed by loosening the screw that holds them. Two screws release the guide arm and when they are tightened up the arm is automatically squared again.

Complete particulars of the many time and trouble-saving features of this mitre box can be obtained from the Kawalle Automatic Mitre Box Company, Manitowoc, Wis.

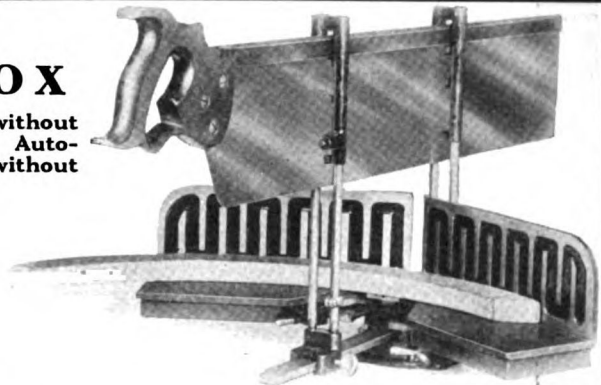

## **The KAWALLE AUTOMATIC MITRE BOX**

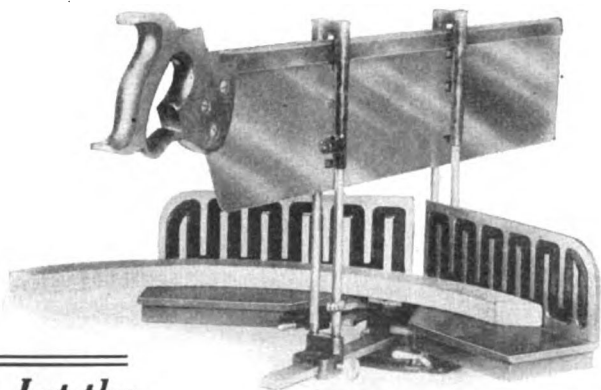

Automatically gives the True Center Cuts of any corner without knowing how many degrees the corner is out of square. Automatically gives the True Radius Cut of any size circle work without knowing the diameter of the circle.

### **SAVES FIGURING—SAVES TIME**

and produces perfect, accurate work—gives a perfect joint on any square or circle work without any block planing. Simple to use, can be neatly folded for placing in tool chest. Sold on a Money-back if not satisfied guarantee. Your dealer handles them; if not, write in today and learn full particulars about this time and trouble-saving tool.

*Let the*

## **Kawalle Automatic Mitre Box**

do your figuring. It will automatically do a quieter and better job than you can by fussing around. And the time you save on one job will pay for the tool.

The true center cut of any corner, or the true radius cut of any circle found in a moment's time; no puzzling about degrees or diameters.

As one man said:—"I can do the whole job in less time with the Kawalle than the figuring alone takes the old way."

If you cannot get same at your dealer, we will be pleased to ship you one on 10 days' Free Trial. **\$18.00**
